

**Name:**

Ayse Ayser Tavzar

Country:

Cyprus

About you...

I was born on 04 February 1970 in Istanbul and I was there until university. I enjoyed sports, reading books, exploring areas, and camping. After I graduated from high school, I moved to Ankara, the capital of Turkey. I went to Middle East Technical University (METU) and graduated from there in 1993. After that, I completed my Master's in 1996 in business management. I started my career in Turkey by selling JOHA emulsifying salts and worked in the meat and milk industries. I have moved on to the milk industry and have developed myself in that industry. Now I am married, have two children, and live in Cyprus. I still enjoy reading books, hiking, and camping with my family.

Why did you join the BRCGS Professional Programme?

I joined the programme to improve myself and keep up with the constant system changes worldwide. I wanted to innovate myself and adapt to the new regulations.

What value do you personally feel the BRCGS Professional certification brings to you?

The programme has changed my vision about the industry, systems, and working behavior. It also helped me connect, talk, and share with other professionals, which will be a lifelong learning and networking opportunity.

How has the training helped improve operations at your site/company?

The training has helped me to get the solutions both quickly and simply while still making sure we stick to the regulations. It has also improved our detailing, researching, and preparing for the next day and inspections.

What did you most enjoy about the training?

The most enjoyable task was working and learning from different sectors and industries. Also, the communication between trainers and trainees was very kind, which made my attendance more effective and joyful.

What are you most looking forward to within the Professional community?

The programme helped me to connect with professionals and it is going to be a lifelong learning and connection opportunity for each of us. I am very appreciative to be in that community to share, to learn, and innovate myself every day.

How do you plan to keep your skills up to date?

The world is changing and we have to develop ourselves every day to keep up with the changes, so my plans aren't going to vary too much as they did before. I plan on innovating with new strategies and technology and continuously reading, learning, and searching.

What are your career ambitions/aims?

Before joining the programme, I already set my ambitions and aims when I graduated from my university, which led me to the winners' team for all parts of life, so I am thankful to Middle East Technical University (METU) for that. My aims were and still are to be more innovative, qualified, and secure with the regulations and apply them. I also want to be more positive, enjoy what I do, and be more competitive. I will continue to do so till my last breath.
